Authorisations, Governance & Risk management

Identity Management

Service Management

Landscape Optimization

- A central overview of the entire User and Role Landscape
- Authorizations and users
 - Decentralized AIM requests
 - Running with or without Workflows
- Flexible risk definition, scans and mitigation and Re-validations
- Time and cost savings through secure and user-friendly operations

- Stepwise implementation, e.g. by modules or countries, NO „big-bang“ approach results in more successful implementation
- Flexible processes for centralized and decentralized administration leads to higher user satisfaction
- Designed for high performance and mass maintenance, increasing quality
- Exceptionally high customer satisfaction and retention
